

50 W Dimmable two channel intelligent Colour LED driver

Product code: 5775

50 W 220 – 240 V 0/ 50 – 60 Hz

- 2-channel tunable white for human centric lighting
- Wide dynamic range of colour temperatures on all dimming levels *
- 0.1 % - 100 % dimming range per single channel (total range 2 % - 100 %)*
- SELV output protection for safety and flexibility in luminaires
- Amplitude dimming for the highest quality light output, complying with IEEE 1789 recommendation
- NFC technology for wireless programming
- Suitable for DC use
- Ideal solution for Class I and Class II
- Helvar Driver Configurator support

*] See pages 2-3 for details

Functional Description

- DALI Type 8 compatible. One DALI address for controlling colour temperature by two output channels
- DALI colour type: Colour temperature T_c
- Adjustable constant current output: 100 mA to 1200 mA
- Current setting programmable via NFC, DALI or with external (LED-Iset) resistors
- Suitable for flicker-free camera recording applications
- Patented Switch-Control 2 functionality for easy-to-use intensity and colour temperature control with single push button
- Full load recognition with automatic recovery, open and short circuit protection
- Multipurpose terminal LED-Iset/NTC for current setting or overtemperature protection
- Constant Light Output (CLO), adjustable up to 100 000 h (default disabled)
- Energy consumption monitor (real time), running hour monitor (accumulative), energy management (accumulative)
- Memory bank for OEM customer data

Mains Characteristics

Nominal rated voltage range	220 V – 240 V, 0 / 50 – 60 Hz
AC voltage range	198 VAC – 264 VAC
	Withstands max. 320 VAC (max. 1 hour)
DC voltage range	176 VDC – 280 VDC
DC starting voltage	> 190 VDC
Mains current at full load	0.23 - 0.26 A
Frequency	0 / 50 Hz – 60 Hz
Stand-by power consumption	< 0.5 W
THD at full power	< 10 %
Leakage current to earth	< 0.7 mA
Tested surge protection	1 kV L-N, 2 kV L-GND (IEC 61000-4-5)
Tested fast transient protection	4 kV (IEC 61000-4-4)

Insulation between circuits & driver case

Mains circuit - SELV circuit	Double/reinforced insulation
DALI circuit - SELV circuit	Double/reinforced insulation
Mains circuit - DALI circuit	Basic insulation
Output - Driver case	Basic insulation
Mains and DALI circuit - Driver case	Double/reinforced insulation
Mains input - Ground input	Double/reinforced insulation

Load Output (SELV <60 V)

Output current (I_{out})	100 mA – 1200 mA
Accuracy	$\pm 5\%$ ¹⁾
Ripple	< 1 % ²⁾ at ≤ 120 Hz
	<small>1) At 350 - 1200 mA range. 2) Low frequency, LED load: Cree XP-G LEDs.</small>
U_{out} (max) (abnormal)	60 V

	100 mA	350 mA (default)	1200 mA
I_{LED}^*	100 mA	350 mA (default)	1200 mA
P_{Rated}^*	5 W	17.5 W	50.4 W
U_{LED}^*	12 – 50 V	12 – 50 V	20 – 42 V
PF (λ) at full load	0.63	0.89	0.98
Efficiency (η) at full load	71 %	85 %	88 %

*Current and power are divided into two channels according to the chosen CCT and module specifications. Total maximum power of the two channels can't exceed given $P_{OUT(MAX)}$.

Operating window

1) From 500 mA to 1200 mA, full dimming range (2% - 100%) and wide CCT dynamic range available in the whole area. Each single channel can dim down to 0.1% level.
 2) From 100 mA to 500 mA, the absolute minimum dimming level is limited to 10 mA of total current. Dimming / CCT control possible all the way down to that current (dimming range 10% - 100% at 100 mA), but the dynamic range may be limited. Each single channel can dim down to 0.5 mA level.

Driver performance

Operating Conditions and Characteristics

Absolute highest allowed t_c point temperature	75 °C
T_c life (50 000 h) temperature	75 °C
Ambient temperature range	-25 °C ... +45 °C*
Storage temperature range	-40 °C ... +80 °C
Maximum relative humidity	No condensation
Life time(90 % survival rate)	100 000 h, at $t_c = 65$ °C 70 000 h, at $t_c = 70$ °C 50 000 h, at $t_c = 75$ °C

*) For other than independent use, higher t_a of the controlgear possible as long as highest allowed t_c point temperature is not exceeded

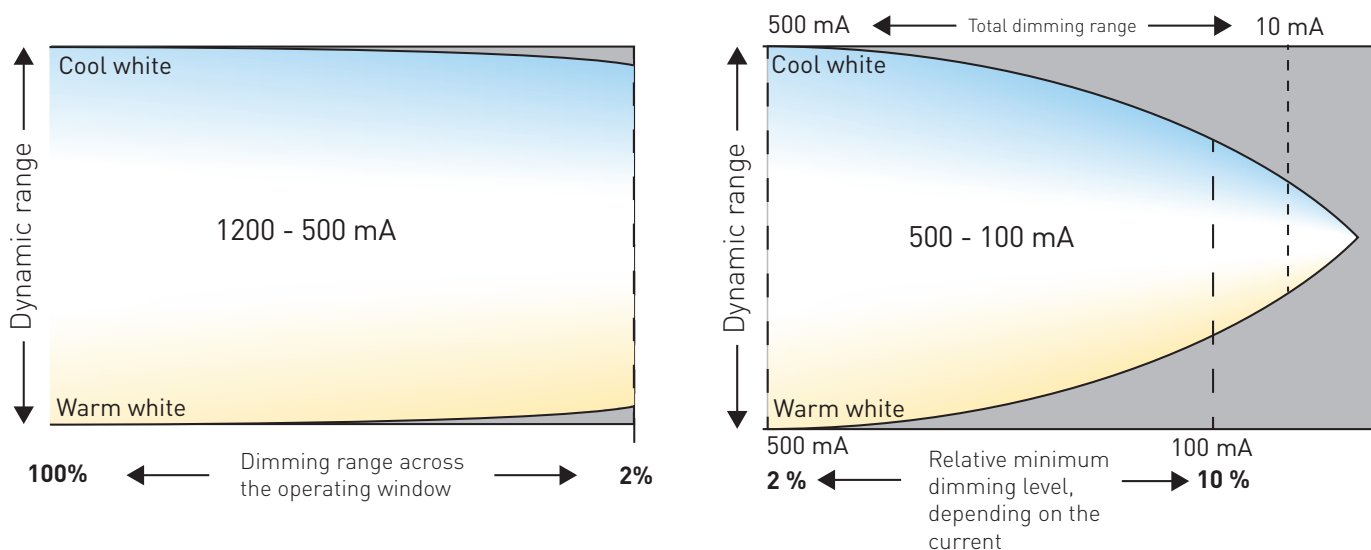

Amplitude dimming technology

Dimming range per single channel	Dimming range in tunable white use	Dimming technology
0.1 % - 100 %	2 % - 100 %	Amplitude (DC)

LL50iC-DA-100-1200 LED driver implements amplitude dimming technology across whole dimming range. Amplitude dimming offers the best available technology for dimming the light output in an accurate and flicker-free way to ensure high quality lighting in even the most demanding situations such as camera recording applications. Amplitude dimming technology complies with IEEE 1789-2015 recommendations of current modulation to mitigate health risks to viewers.

Dynamic range in colour temperature control

LL50iC-DA-100-1200 LED driver is ready to be used out of the box.

Highest precision and color consistency in controlling combinations of different luminaire types is achieved by setting colour temperatures and lumen outputs before use with Helvar driver configurator. The configured colour temperatures of the channels should match the ones of the LED modules used. The factory default settings of cool and warm channels are 6500 K and 2700 K accordingly.

After setting up the colour temperatures, the lumen output values of full dimming level (100 %) should be configured for both channels. By default, output currents are set to be equal in both channels.

Switch-Control with tunable white

Helvar iC drivers provide the simplest form of control in tunable white with Helvar patented single switch Switch-Control functionality. With single push button the user is able to control both the light intensity and colour temperature to the desired level. The system synchronises the light levels and CCTs every time the colour temperature is adjusted to ensure pleasant user experience and uncompromised lighting comfort. More information about the functionality can be found in Switch-Control user guide at www.helvar.com.

Wireless configuration

LL50iC-DA-100-1200 LED driver is equipped with NFC wireless technology for effortless configuration of the driver via Helvar Driver Configurator Support. Helvar Driver Configurator enables easy-to-use automatic configuration of the driver parameters via NFC, without mains or DALI connection to the driver. The most popular MD-SIG qualified NFC readers (FEIG CPR30-USB & ISC. MR102-USB) are supported giving flexibility for the operator. For further information about the usage with Helvar Driver Configurator, please see the user guide at www.helvar.com

Quantity of drivers per miniature circuit breaker 16 A Type C

Based on inrush current I_{peak}	Typ. peak inrush current I_{peak}	1/2 value time, Δt	Calculated energy, $I_{peak}^2 \Delta t$
65 pcs.	26 A	152 μs	0.0717 A ² s

CONVERSION TABLE FOR OTHER TYPES OF MINIATURE CIRCUIT BREAKER

MCB type	Relative quantity of LED drivers
B 10 A	37 %
B 16 A	60 %
B 20 A	75 %
C 10 A	62 %
C 16 A	100 % [see table above]
C 20 A	125 %

CONTINUOUS CURRENT

Total continuous current of the drivers and installation environment must always be considered and taken into calculations when installing drivers behind miniature circuit breaker. Example calculation of total drivers amount limited by continuous current: $n(I_{cont}) = [16 A (I_{nom,Ta}) / \text{"nominal mains current with full load"}] \times 0.76$. This calculation is an example according to recommended precautions due to multiple adjacent circuit breakers (> 9 MCBs) and installation environment (T_a 30 degrees); variables may vary according to the use case. Both inrush current and continuous current calculations are based on ABB S200 series circuit breakers. More specific information in ABB series S200 circuit breaker documentation.

NOTE! Type C MCB's are strongly recommended to use with LED lighting. Please see more details in "MCB information" document in each driver product page in "downloads & links" section.

Connections and Mechanical Data

Wire size	0.5 mm ² – 1.5 mm ²
Wire type	Solid core and fine-stranded
Wire insulation	According to EN 60598
Maximum driver to LED wire length	1.5 m
Weight	263 g
IP rating	IP20

Connections

Note:

- Earth connection to PE terminal is optional and not needed for the functionality of the driver. See page 4 for details.
- Not suitable for load side switching operation
- Label may differ if the unit is preset to fixed current

Dimensions (mm)

The LED-Iset resistor/current setting values are adjusted according to the LEDset specification. The resistor value for each required output current can thus be calculated from the formula $R [\Omega] = [5 \text{ V}] / I_{\text{out}} [\text{A}] * 1000$. Below are the available LED-Iset resistors from Helvar, pre-adjusted for the most common output currents.

Helvar LED-Iset resistors and currents (Nominal $I_{\text{out}} (\pm 5 \% \text{ tol.}^*)$)

LED-Iset resistor model	MAX	1150 mA	1100 mA	1050 mA	1000 mA	950 mA	900 mA	850 mA	800 mA	750 mA	700 mA	650 mA	600 mA	550 mA	500 mA	450 mA	400 mA	350 mA	300 mA	250 mA	200 mA	150 mA	100 mA	No resistor
$I_{\text{out}} (\text{mA})$	1200	1150	1100	1050	1000	950	900	850	800	750	700	650	600	550	500	450	400	350	300	250	200	150	100	350
Order code	T90000	T91150	T91100	T91050	T91000	T90950	T90900	T90850	T90800	T90750	T90700	T90650	T90600	T90550	T90500	T90450	T90400	T90350	T90300	T90250	T90200	T90150	T90100	N/A
Resistance values (Ω)	0	4.32k	4.53k	4.75k	4.99k	5.23k	5.6k	5.9k	6.2k	6.65k	7.15k	7.68k	8.25k	9.09k	10k	11k	12.4k	14.3k	16.5k	20k	24.9k	33.2k	50.0k	∞

**) At 350 - 1200 mA current range.*

The current can be adjusted also with normal resistors by selecting suitable resistor value (formula $R [\Omega] = [5 \text{ V}] / I_{\text{out}} [\text{A}] * 1000$). Reference resistor values can be found below order code in the table above.

LL50iC-DA-100-1200 LED driver is suited for built-in usage in luminaires. In order to have safe and reliable LED driver operation, the LED luminaires will need to comply with the relevant standards and regulations (e.g. IEC/EN 60598-1). The LED luminaire shall be designed to adequately protect the LED driver from dust, moisture and pollution. The luminaire manufacturer is responsible for the correct choice and installation of the LED drivers according to the application and product datasheets. Operating conditions of the LED drivers may never exceed the specifications as per the product datasheet.

Installation & operation

Maximum ambient and t_c temperature:

- For built-in components inside luminaires, the t_a ambient temperature range is a guideline given for the optimum operating environment. However, integrator must always ensure proper thermal management (i.e. mounting base of the driver, air flow etc.) so that the t_c point temperature does not exceed the t_c maximum limit in any circumstance.
- Reliable operation and lifetime is only guaranteed if the maximum t_c point temperature is not exceeded under the conditions of use.

Current setting resistor

LL50iC-DA-100-1200 LED driver features a constant current output adjustable via current setting resistor.

- An external resistor can be inserted in to the current setting terminal, allowing the user to adjust the LED driver output current.
- When no external resistor is connected, then the LED drivers will operate at their default lowest current level.
- A standard through-hole resistor can be used for the current setting. To achieve the most accurate output current it is recommended to select a quality low tolerance resistor. Minimum diameter for resistor leg is 0.51mm.
- Always connect the current setting resistor only into the terminals marked with LED-Iset on the LED driver label.
- For the resistor/current values, refer to the table on page 4.

LED driver earthing

- LL50iC-DA-100-1200 is LED driver suitable for Class I and II luminaires. When used inside **Class I and Class II** luminaires, the earth cable is recommended to be connected to improve the EMC performance of the driver, but it is not mandatory. It is the responsibility of the integrator to ensure that the assembled luminaire EMC performance complies with the latest standards.

Miniature Circuit Breakers (MCB)

- Type-C MCB's with trip characteristics in according to EN 60898 are recommended.
- Please see more details in "MCB information" document in each driver product page in "downloads & links" section.

Helvar Driver Configurator -support

LL50iC-DA-100-1200 LED driver is supported by Helvar Driver configurator software. The LL50iC-DA-100-1200 driver supports output current setting with software, the output current of the driver can be programmed using Helvar Driver Configurator, as well as OEM customer data and parameters for functions such as CLO and Tunable White behavior. Programming the driver with Helvar Driver Configurator can be done either wirelessly via NFC or then via DALI bus. Also the operation of the multifunction LED-Iset terminal usage can be changed from current setting resistor (default) to NTC overtemperature protection operation.

Lamp failure functionality

No load

When open load is detected, driver will go to standby power consumption and remains in automatic recovery mode. In automatic recovery mode, the driver waits till load is returned and once that happens, it returns to normal operation.

Short circuit

When short circuit is detected, driver goes to automatic recovery mode and follows the same logic as described in the no load condition.

Overload

When overload is detected, driver goes to standby mode and returns through mains reset.

Underload

When undervoltage is detected, driver goes to standby mode and returns through mains reset.

NTC trigger

When NTC is enabled via Helvar Driver Configurator, driver follows NTC feature behaviour. Default NTC trigger point is 8,2 k Ω , after which the driver starts to decrease the output level.

Switch-Control 2

Use of Switch-Control functionality

- Maximum numbers of LED drivers to be connected to one switch is 60. Wire length is not restricted by the driver technology.
- Ensure that all components connected to Switch-Control circuitry are mains rated.
- More information in Switch-Control User Guide at www.helvar.com.
